

Going to the Hospital with COVID-19

COVID-19 is a virus that can make people sick.

Some people who have COVID-19 have:

- a sore throat
- a fever
- a cough, or
- trouble breathing

Most people with COVID-19 will stay home until they get better.

Some people with COVID-19
might need to go to the hospital.

If I get COVID-19, I might need to go to the hospital if:

- I am not feeling better after 7 days

SUN	MON	TUE	WED	THU	FRI	SAT

- A doctor, nurse or my primary worker tells me to go to the hospital, or

- I have trouble breathing

If I go to the hospital, I will need to bring:

☐ my health card

☐ my medications, and

☐ my Hospital Transfer form

I will need to put all of these things into a clear plastic bag.

If I have hearing aids or glasses,
I will need to bring them too.

I can also bring some things to do for when I start feeling better, like:

-my tablet and charger

-music to listen to, and

-books to read

I can also bring some things that help me feel calm, like:

- a stuffed animal, or
- pictures of my favourite people

In the hospital, it's important that I don't give COVID-19 to anyone else. The nurses and doctors in the hospital will be wearing: masks, yellow gowns, and gloves.

It is important for nurses and doctors to wear these things so they don't catch COVID-19 from me.

You might have to wear a mask. It will feel funny at first, but you will get used to it.

The hospital might be very busy and noisy, but the doctors and nurses will tell me what to do.

The doctors and nurses will make you better so you can go home, see your friends, talk to your family, and resume your regular activities.
